## Building Restoration

**Prior to building restoration**

**After repair and painting**

If you have an older building that you would like restored to its original condition, please contact TMI Coatings. Skilled workmen can replace missing, eroded or damaged mortar with new mortar while maintaining the architectural integrity.

- The first step is a careful and professional analysis of the scope of the project.
- Next, all brick areas are power-washed to reveal the full extent of the work needed.
- The building is then tuckpointed to replace deteriorated mortar.

- Deteriorated or missing brick is replaced with matching brick and cracks are filled with epoxy injection.
- Finally, the finished surface is coated with an elastomeric, weather-resistant coating with a 5-year warranty.

We have skilled fieldmen trained in building restoration and coating.
